

Lesson 2

Using Single-Row Functions to Customize Output

ORACLE

Copyright © 2010, Oracle and/or its affiliates. All rights reserved.

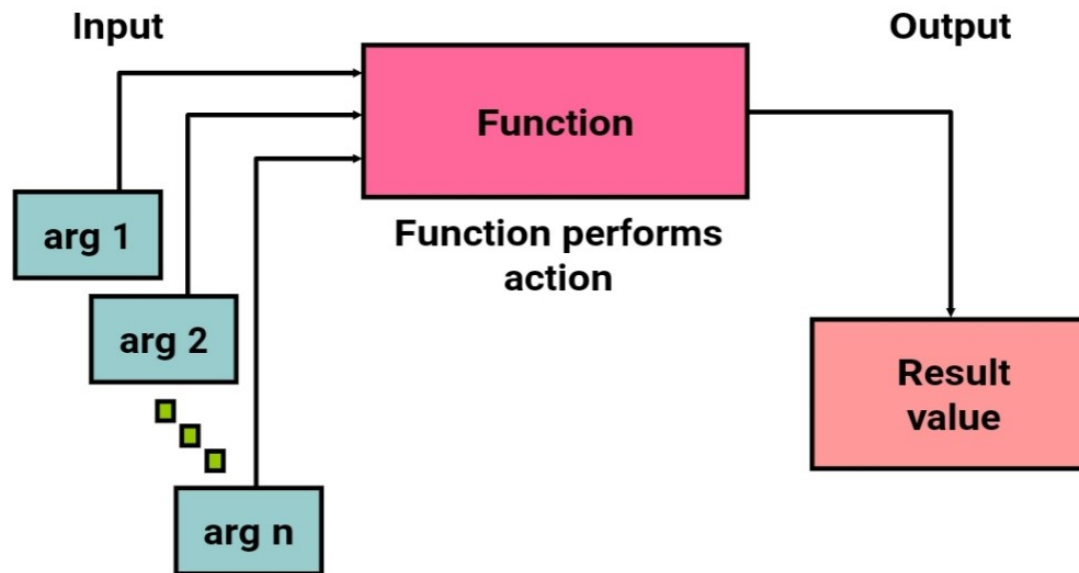

What You will learn at the end of this Session?

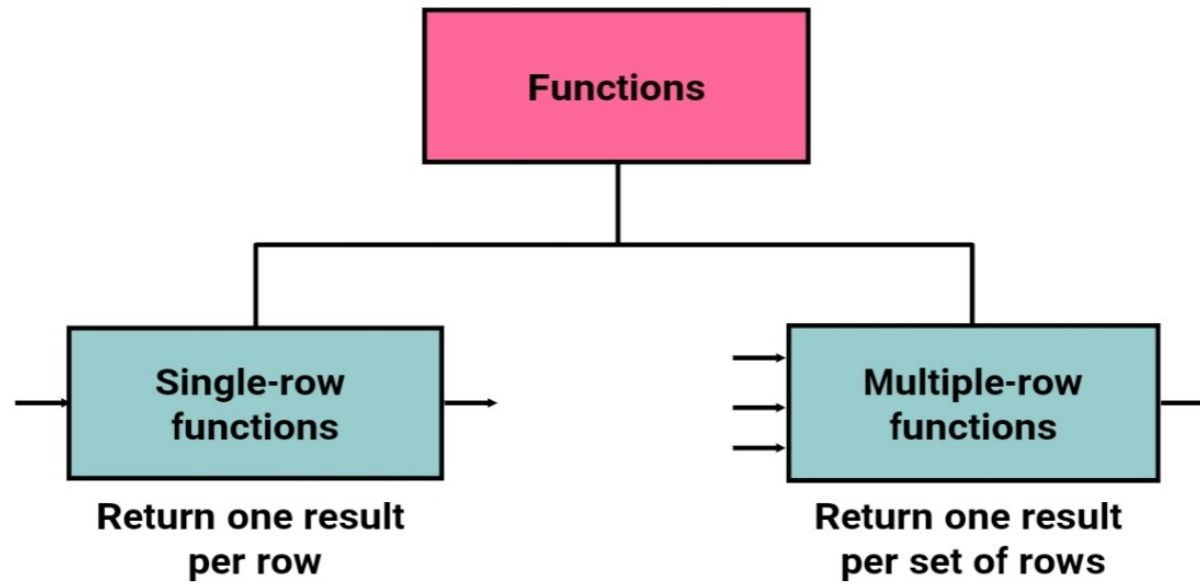

1. Describe the various types of functions available in SQL

2. Use the character, number, and date functions in SELECT statements

ORACLE

Single-Row Functions

Manipulate data items

Accept arguments and return one value

Act on each row that is returned

Return one result per row

May modify the data type

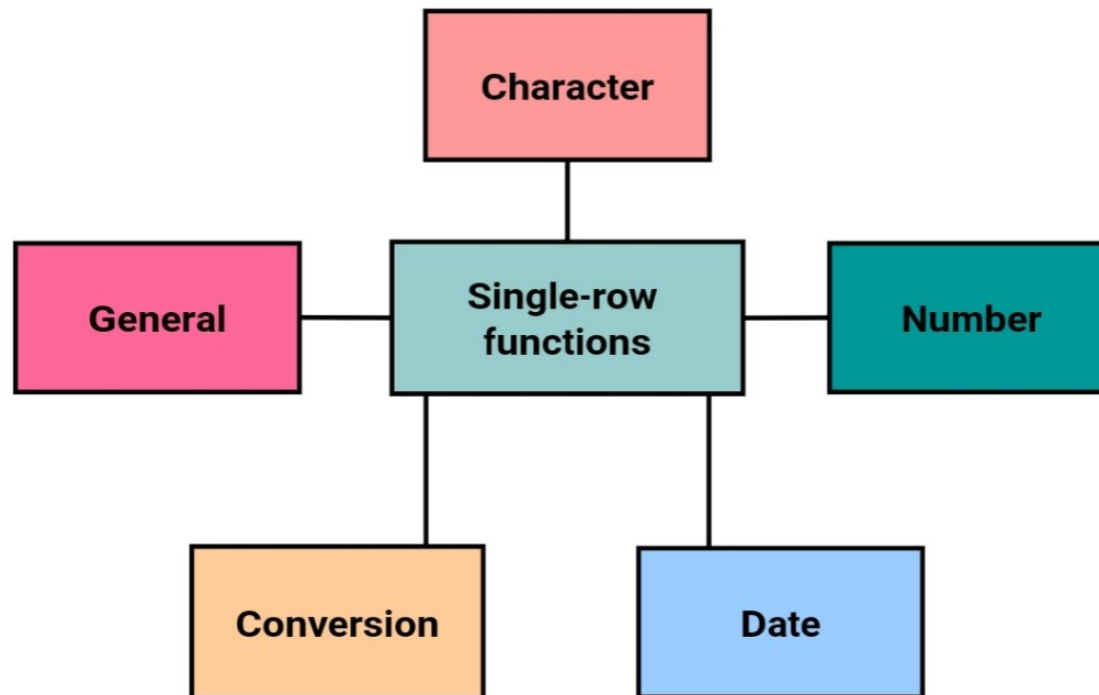

Can be nested

Accept arguments that can be a column or an expression

```
function_name [(arg1, arg2,...)]
```

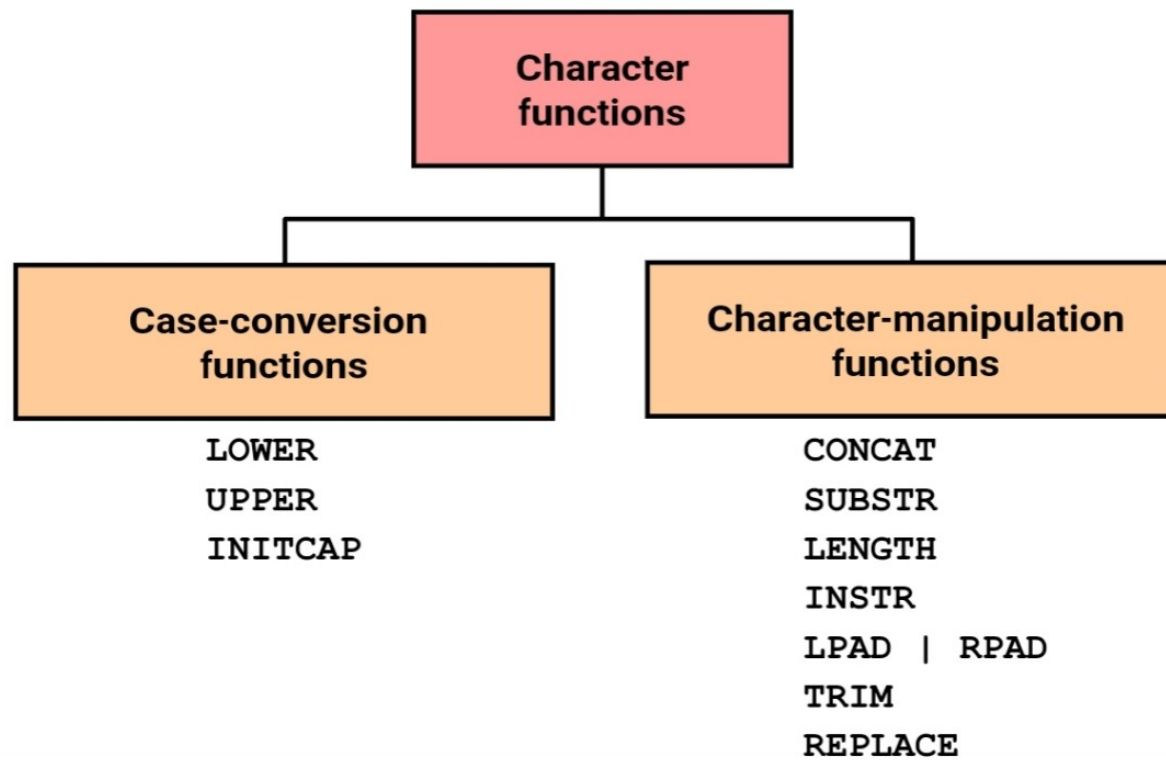

ORACLE

Single-Row Functions

ORACLE

Character Functions

ORACLE

Case-Conversion Functions

- These functions convert the case for character strings:

| Function | Result |
|-------------------------|------------|
| LOWER('SQL Course') | sql course |
| UPPER('SQL Course') | SQL COURSE |
| INITCAP('SQL Course') | Sql Course |

Using Case-Conversion Functions

- Display the first name, last name, and email for customer Donald:

```
SELECT first_name, last_name, email  
FROM customers  
WHERE first_name = 'donald';
```

0 rows selected

```
SELECT first_name, last_name, email  
FROM customers  
WHERE lower(first_name) = 'donald';
```

| |  FIRST_NAME |  LAST_NAME |  EMAIL |
|---|--|---|---|
| 1 | Donald | OConnell | DOCONNEL |

Character-Manipulation Functions

•These functions manipulate character strings:

| Function | Result |
|---|----------------|
| <code>CONCAT('Hello', 'World')</code> | HelloWorld |
| <code>SUBSTR('HelloWorld',1,5)</code> | Hello |
| <code>LENGTH('HelloWorld')</code> | 10 |
| <code>INSTR('HelloWorld', 'W')</code> | 6 |
| <code>LPAD(salary,10, '*')</code> | *****24000 |
| <code>RPAD(salary, 10, '*')</code> | 24000***** |
| <code>REPLACE('JACK and JUE', 'J', 'BL')</code> | BLACK and BLUE |
| <code>TRIM('H' FROM 'HelloWorld')</code> | elloWorld |

Number Functions

- **ROUND:** Rounds value to a specified decimal
- **TRUNC:** Truncates value to a specified decimal
- **MOD:** Returns remainder of division

| Function | Result |
|-------------------|--------|
| ROUND (45.926, 2) | 45.93 |
| TRUNC (45.926, 2) | 45.92 |
| MOD (1600, 300) | 100 |

Using the ROUND Function

The diagram illustrates the use of the ROUND function in SQL. It shows a query and its output with numbered annotations:

- 1**: Points to the first argument of the ROUND function, the number 45.923.
- 2**: Points to the second argument of the ROUND function, the number of decimal places (2, 0, or -1).
- 3**: Points to the FROM clause, specifically the table DUAL.

SQL Query:

```
SELECT ROUND(45.923, 2), ROUND(45.923, 0),  
       ROUND(45.923, -1)  
FROM   DUAL;
```

Query Results:

| | ROUND(45.923,2) | ROUND(45.923,0) | ROUND(45.923,-1) |
|---|-----------------|-----------------|------------------|
| 1 | 45.92 | 46 | 50 |

Arrows indicate the mapping from the annotations to the query and results:

- 1**: Points to the value 45.92 in the first column of the results.
- 2**: Points to the value 46 in the second column of the results.
- 3**: Points to the value 50 in the third column of the results.

DUAL is a public table that you can use to view results from functions and calculations.

Using the TRUNC Function

The diagram illustrates the use of the TRUNC function in SQL. It shows a query and its output with annotations:

Query:

```
SELECT TRUNC(45.923, 2), TRUNC(45.923),  
       TRUNC(45.923, -1)  
FROM   DUAL;
```

Results:

| | TRUNC(45.923, 2) | TRUNC(45.923) | TRUNC(45.923, -1) |
|---|------------------|---------------|-------------------|
| 1 | 45.92 | 45 | 40 |

Annotations:

- Green circle 1 points to the first argument of the first TRUNC function in the query and the first column header in the results.
- Green circle 2 points to the second argument of the first TRUNC function in the query and the second column header in the results.
- Green circle 3 points to the third argument of the first TRUNC function in the query and the third column header in the results.

Using the MOD Function

- For all employees with the job title of Sales Representative, calculate the remainder of the salary after it is divided by 5,000.

```
SELECT order_id, order_total, MOD(order_total, 5000)
FROM orders
WHERE order_id IN(2458, 2397, 2454) ;
```

| | ORDER_ID | ORDER_TOTAL | MOD(ORDER_TOTAL,5000) |
|---|----------|-------------|-----------------------|
| 1 | 2397 | 42283.2 | 2283.2 |
| 2 | 2454 | 6653.4 | 1653.4 |
| 3 | 2458 | 70647.34 | 647.34 |

Working with Dates

- The Oracle Database stores dates in an internal numeric format: century, year, month, day, hours, minutes, and seconds.
- The default date display format is DD-MON-RR.
 - Enables you to store 21st-century dates in the 20th century by specifying only the last two digits of the year
 - Enables you to store 20th-century dates in the 21st century in the same way

```
SELECT order_id, round(order_date), order_status
FROM orders
WHERE order_date <= '21-MAR-96' ;
```

| | ORDER_ID | ROUND(ORDER_DATE) | ORDER_STATUS |
|---|----------|-------------------|--------------|
| 1 | 2442 | 28-JUL-90 | 9 |
| 2 | 2445 | 28-JUL-90 | 8 |

ORACLE

Using the SYSDATE Function

•SYSDATE is a function that returns:

- Date
- Time

```
SELECT sysdate  
FROM dual;
```

| | SYSDATE |
|---|-----------|
| 1 | 10-JUN-09 |

Arithmetic with Dates

- Add or subtract a number to or from a date for a resultant date value.
- Subtract two dates to find the number of days between those dates.
- Add hours to a date by dividing the number of hours by 24.

Using Arithmetic Operators with Dates

```
SELECT order_id, (SYSDATE - round(Order_date)) / 7 AS "WEEKS"  
FROM orders  
WHERE order_id IN(2458, 2397, 2454);
```

| | ORDER_ID | WEEKS |
|---|----------|--|
| 1 | 2397 | 599.501043320105820105820105820105820106 |
| 2 | 2454 | 606.358186177248677248677248677248677249 |
| 3 | 2458 | 613.072471891534391534391534391534391534 |

Date-Manipulation Functions

| Function | Result |
|----------------|------------------------------------|
| MONTHS_BETWEEN | Number of months between two dates |
| ADD_MONTHS | Add calendar months to date |
| NEXT_DAY | Next day of the date specified |
| LAST_DAY | Last day of the month |
| ROUND | Round date |
| TRUNC | Truncate date |

ORACLE

Using Date Functions

| Function | Result |
|---|-------------|
| MONTHS_BETWEEN ('01-SEP-95','11-JAN-94') | 19.6774194 |
| ADD_MONTHS ('31-JAN-96',1) | '29-FEB-96' |
| NEXT_DAY ('01-SEP-95','FRIDAY') | '08-SEP-95' |
| LAST_DAY ('01-FEB-95') | '28-FEB-95' |

Using ROUND and TRUNC Functions with Dates

•Assume SYSDATE = '25-JUL-03':

| Function | Result |
|---------------------------|-----------|
| ROUND (SYSDATE, 'MONTH') | 01-AUG-03 |
| ROUND (SYSDATE , 'YEAR') | 01-JAN-04 |
| TRUNC (SYSDATE , 'MONTH') | 01-JUL-03 |
| TRUNC (SYSDATE , 'YEAR') | 01-JAN-03 |

•Which of the following statements are true about single-row functions?

- 1.Manipulate data items
- 2.Accept arguments and return one value per argument
- 3.Act on each row that is returned
- 4.Return one result per set of rows
- 5.May not modify the data type
- 6.Can be nested
- 7.Accept arguments that can be a column or an expression

Session Summary

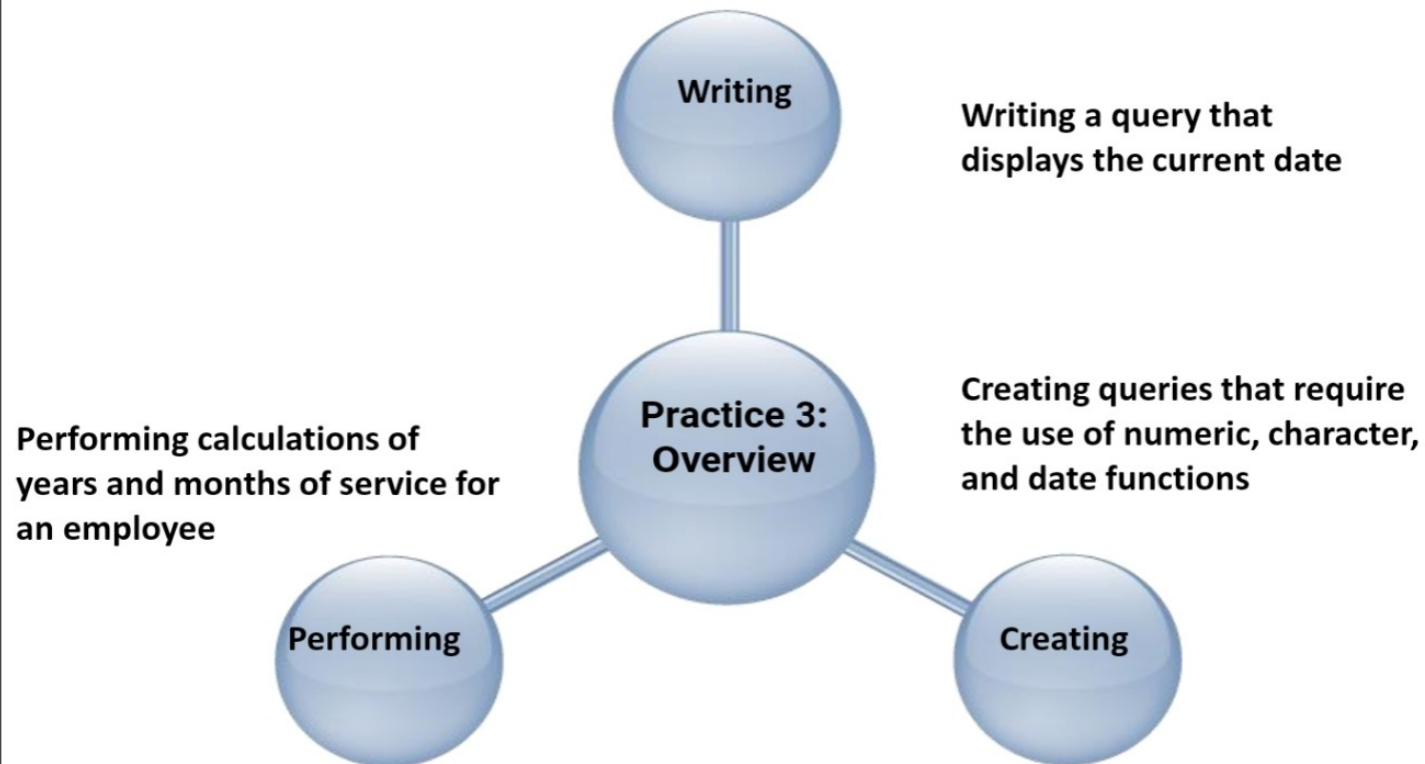

1. Perform calculations on data using functions

2. Modify individual data items using functions

ORACLE

Practice 3: Overview

This practice covers the following topics

ORACLE
